

Strategic Program

Environment – Energy
Innovation - Sustainability

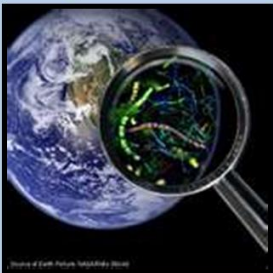

"We deliver measurable results that make the difference"

Systems Plus is a small business, headquartered in Rockville, Maryland and takes pride in delivering strategic management consulting and technology solutions with speed and agility of a small enterprise since 1991. Systems Plus is a financially sound organization with a Top-Secret Cleared Facility and has achieved success for both defense and civilian agencies through its Business Practices.

Environmental Capabilities

Systems Plus provides comprehensive environmental management, engineering, and technical services. We have a diverse team of associates including environmental managers, engineers, scientists, and specialists. We provide extensive environmental consulting services in environmental programs and project management. Our capabilities and services include environmental policy development and strategic planning, requirements and risk determinations, program and project development, implementation and support, budget and funding determinations, operational and environmental investigation, risk assessment, mitigation, design, and monitoring, and program and project assessment, auditing, and quality assurance.

Management Services

The following is a list of our most highly demanded environmental management services:

- Policy Analysis, Development, and Strategic Plans
- Requirements determinations and program development
- Risk Analysis and prioritization
- Program implementation, management, and support
- Master planning/real estate/land development support
- Regulatory Reporting, liaison, and negotiation
- Program auditing and quality assurance

Technical Services

The following is a list of our most highly demanded environmental technical services:

- Evaluation of existing studies
- Site investigations and assessments
- Contamination characterization and delineation
- Risk analysis and remedial determinations
- Mitigation and remediation plan development
- Cultural, historical and natural resource assessments
- Regulatory Reporting, liaison, and negotiation

Engineering Services

The following is a list of our most highly demanded environmental engineering services:

- Remediation project, system, process design
- Industrial, municipal, and hazardous waste storage treatment and disposal
- Industrial, storm water, and groundwater management programs
- Engineering and construction oversight and quality assurance
- Independent design review and evaluation
- Regulatory Reporting, liaison, and negotiation

Management – Engineering - Technical

Our environmental management services include environmental assessment and requirements determinations; risk and budget determinations and prioritization; management plans; program and project development, implementation, management, and execution; and executive consultation and regulatory liaison.

Our environmental engineering services include environmental investigation, inspection, assessment and the design of environmental mitigation methodologies and systems. This includes the identification, design, development, and specification of the most practical and economic environmental engineering solutions available.

Our technical services include site, process, and operational investigation to delineate the extent of environmental concerns and determine what mitigative actions are necessary and appropriate. Our staff is experienced in all methods of environmental investigation, sampling, and analysis. We provide investigative plans that identify the most targeted approach for accurately identifying the environmental condition or concern.
